25-27 May 2020

The kerrgeodesic_gw package

kerrgeodesic_gw: SageMath package implementing computations of gravitational waveforms, energy fluxes and inspiralling time for bodies on circular orbits¹ around a Kerr black hole, as well as SNR in LISA detector.

kerrgeodesic_gw is

- entirely open-source:

[https:](https://github.com/BlackHolePerturbationToolkit/kerrgeodesic_gw)

[//github.com/BlackHolePerturbationToolkit/kerrgeodesic_gw](https://github.com/BlackHolePerturbationToolkit/kerrgeodesic_gw)

- distributed via PyPi (Python Package Index):

<https://pypi.org/project/kerrgeodesic-gw/>

so that the installation in SageMath is very easy:

`sage -pip install kerrgeodesic_gw`

- part of the Black Hole Perturbation Toolkit:

<https://bhptoolkit.org/>

- using SageMath differential geometry tools developed through the SageManifolds project:

<https://sagemanifolds.obspm.fr/>

¹General orbits under development (Lazaros Souvatzis)

Example 1: computing generic geodesics in Kerr spacetime

A new feature in kerrgeodesic_gw 0.3

https://nbviewer.jupyter.org/github/BlackHolePerturbationToolkit/kerrgeodesic_gw/blob/master/Notebooks/Kerr_geodesics.ipynb

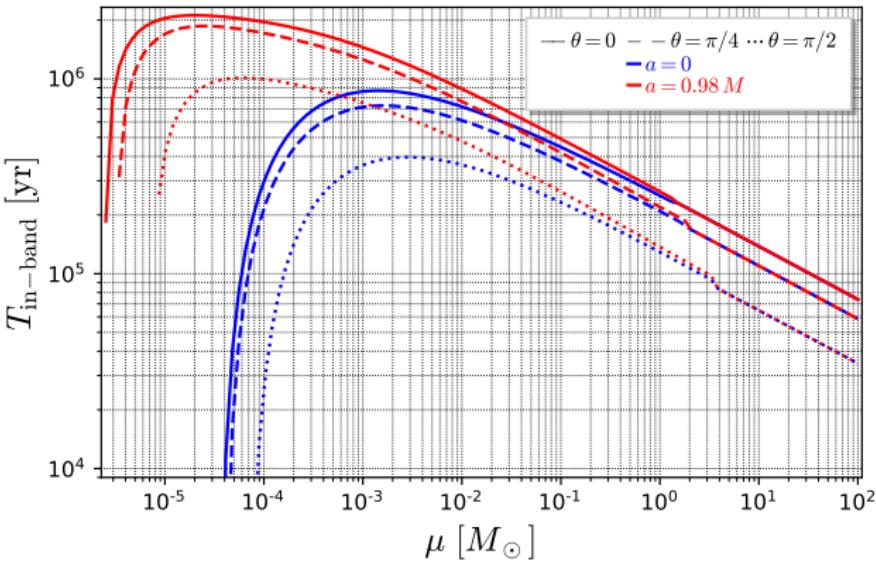

Example 2: gravitational waves from circular orbits around a Kerr black hole

https://nbviewer.jupyter.org/github/BlackHolePerturbationToolkit/kerrgeodesic_gw/blob/master/Notebooks/grav_waves_circular.ipynb

Application: Gravitational waves from bodies orbiting the Galactic Center black hole and their detectability by LISA

[Gourgoulhon, Le Tiec, Vincent & Warburton, A&A 627, A92 (2019)]

Time in LISA band with $\text{SNR}_{1\text{yr}} \geq 10$ for an inspiralling compact object

μ : mass of the inspiralling compact object

Primordial BHs with $1M_\oplus \leq \mu \leq 5M_{\text{Jup}}$ spend more than 10^6 yr in LISA band with $\text{SNR}_{1\text{yr}} \geq 10$

[Gourgoulhon, Le Tiec, Vincent & Warburton, A&A 627, A92 (2019)]

Example 3: some basic functionalities of kerrgeodesic_gw

Spin-weighted spheroidal harmonics and amplitude factors of gravitational waveforms
