380 pages
prix 44 euros

Differential geometry and topology have become essential tools for many theoretical physicists. In particular, they are indispensable in theoretical studies of condensed matter physics, gravity, and particle physics.

This volume offers an introduction to recent developments in several active topics of research at the interface between geometry, topology, quantum field theory and cosmology.

Readership: Graduate students and researchers in theoretical and mathematical physics, Cosmology as well as geometry and topology

TABLE DES MATIÈRES

The Issue of the Beginning in Quantum Gravity
Abhay Ashtekar
Langlands program, Dualities and the Geometry of the space-time
Joseph Kouneiher
Manifolds obtained by soldering together points, lines, etc.
Frédéric Hélein
Energy-momentum's local conservation laws and generalized isometric embeddings of vector bundles
Nabil Kahouadji
Physical Consequences of a Theory with Dynamical Volume Element
Eduardo I. Guendelman & Alexander B. Kaganovich
Local canonical foliations of Lorentzian manifolds with bounded curvature
Philippe G. LeFloch
Ricci flow, scalar curvature and the Poincaré Conjecture
Sylvain Maillot
Topology and Cosmology
Jean-Pierre Luminet
An introduction to the Abnormally Weighting Energy Hypothesis and Non-Universal Tensor-Scalar Gravitation
A. Füzfa & Jean-Michel Alimi
Early Universe : inflation and cosmological perturbations
David Langlois
Fermionic Zero Modes of Cosmic Strings
Philippe Brax, Carsten van de Bruck & Anne-Christine Davis
The Structure of Spacetime and Noncommutative Geometry ...
Fedele Lizzi
Survey of Gravity in Non-Commutative Geometry
Nicolas Franco

BON DE SOUSCRIPTION

valable jusqu'au 28 FÉVRIER 2009 à retourner aux
éditions Hermann, 6 rue de la Sorbonne 75005 PARIS

Géométrie, Topologie,
Théorie des champs quantiques et Cosmologie

(format 160 x 240, 290 p.)
